

# Strategy Hub: Thoughts Module

## Strategy Hub: Thoughts Module

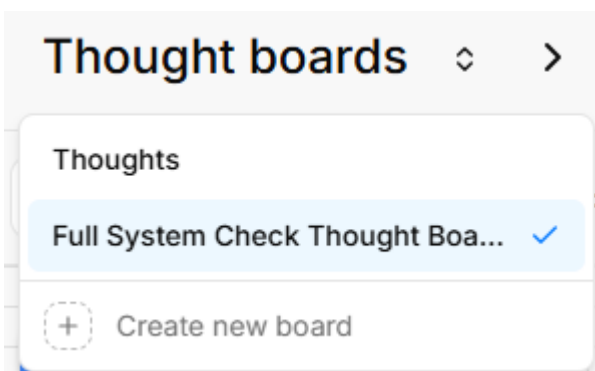

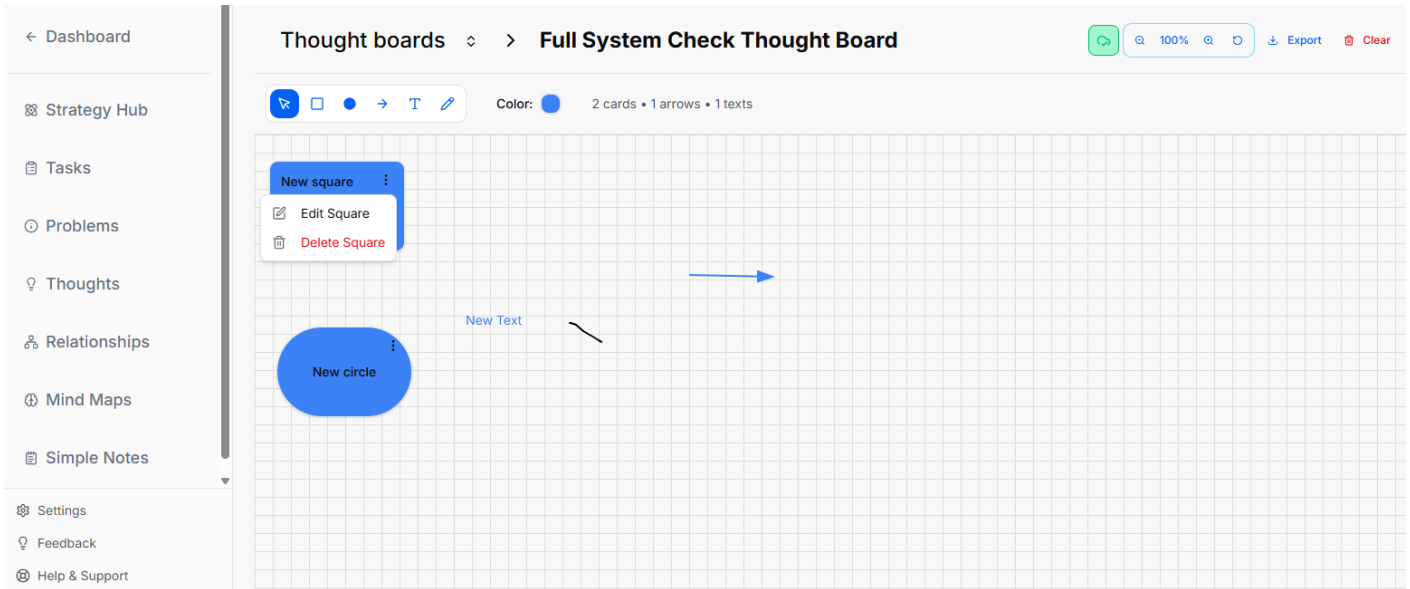

The Thoughts module within the Strategy Hub functions as a digital canvas or whiteboard, allowing you to visually map out brainstorming sessions, strategy links, and project ideas using interactive shapes.

## Managing Thoughts Boards

When you enter the Thoughts module, you are presented with a global directory of your active brainstorming and strategy environments:

- **Creating a Whiteboard:** Click the blue + New Whiteboard button at the top right to start a fresh visual planning environment.
- **Board Directory View:** Track active design spaces along with their last relative modification date under the Updated At column.
- **Filtering & Columns:** Use the top text bars to search specific whiteboard names. Use the Columns dropdown tool to show or hide parameters like Name, Updated\_at, or Actions.
- **Board Context Menu:** Clicking the three dots icon (...) on the right side of any individual board row opens control configurations to View, Rename, or Delete that whiteboard.

## Inside a Thoughts Board

When you select and open an individual whiteboard from your directory, you enter an interactive grid canvas workspace where you can sketch, label, and manipulate shapes.

## Canvas Layout & Header Controls

The top header of the whiteboard area contains configuration data, canvas actions, and canvas statistics:

- Breadcrumb Navigation: The top left displays the active path, showing Thought boards followed by an arrow pointing to your currently opened board name (e.g., *Full System Check Thought Board*).
- Quick Switch Dropdown: Clicking the small up and down arrow icon directly next to "Thought boards" pulls up a quick menu to toggle between your saved boards or click + Create new board without returning to the main directory.
- Canvas Settings & Zoom Toolbar: Located at the top right of the canvas, this bar gives you layout controls:
  - Zoom Controls: Use the zoom-out (`minus`), percentage display (e.g., `100%`), zoom-in (`plus`), and `reset` icons to navigate a dense board.
  - Export: Click the download arrow icon to save a local copy of your canvas layout.

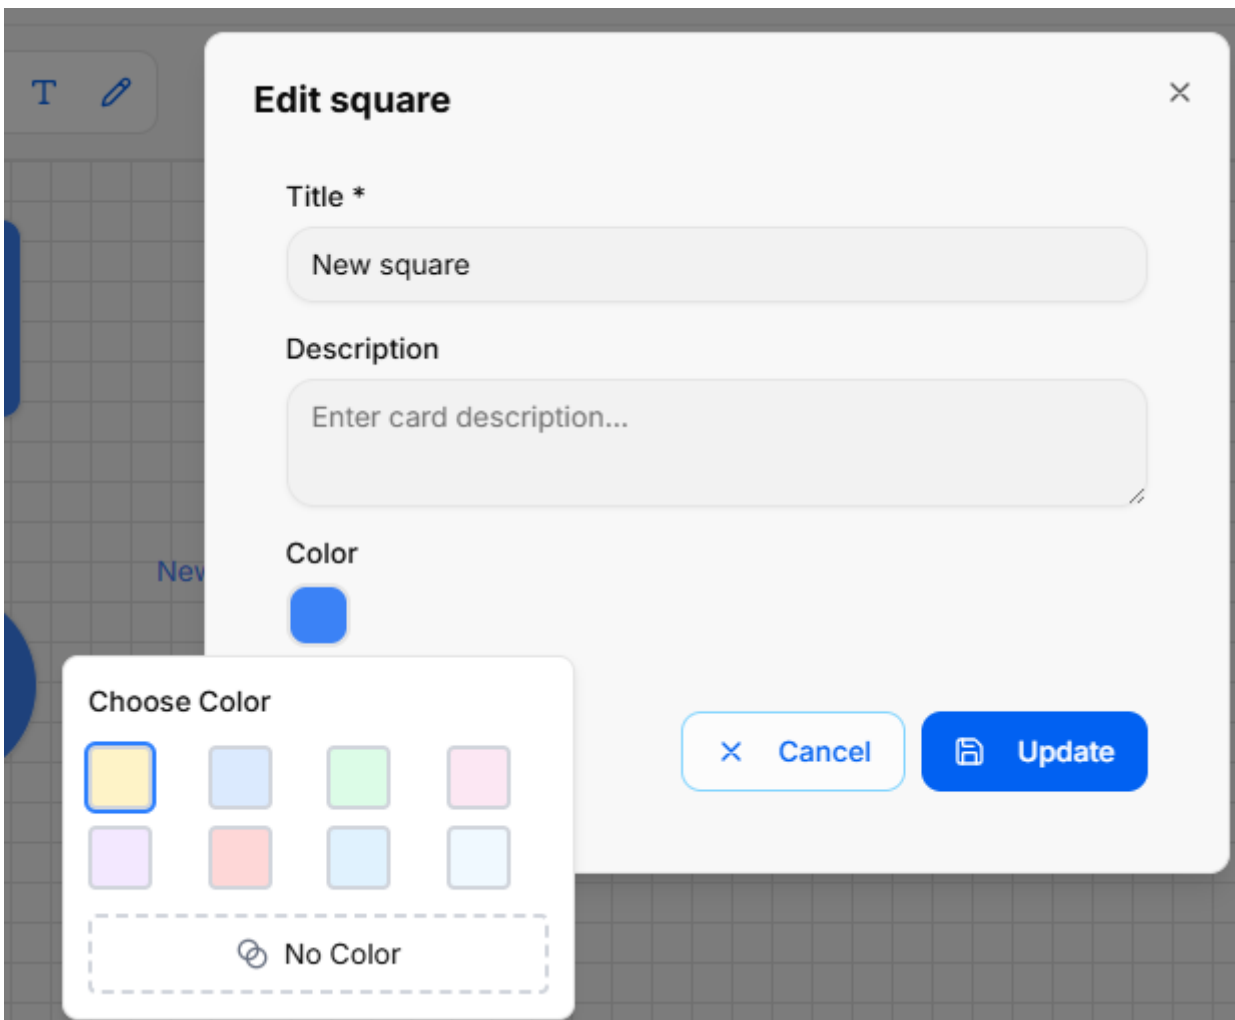

- Clear (Trash Can Icon): A red button that completely wipes all shapes, lines, and data off the current canvas.

## The Canvas Toolbar

A horizontal toolbar floats at the top-left section of the grid canvas to let you build out your board:

- Selection Tool (Cursor Icon): The primary blue pointer used to select, drag, or highlight elements on the grid.
- Square Shape: Click this icon to drop a customizable square onto the workspace.
- Circle Shape: Click this icon to drop a customizable circle onto the workspace.
- Connection Arrow: Click this tool to manually draw directional lines connecting your elements.
- Text Tool ("T" Icon): Allows you to drop standalone text blocks directly onto the open canvas grid.
- Draw Tool (Pencil Icon): Activates freehand drawing or sketching directly on top of the grid space.
- Global Canvas Color: Shows a Color circle indicator (e.g., blue) that tracks your currently selected element tint.
- Board Statistics: Live counters immediately follow the color wheel to show you the exact total of items placed on the canvas (e.g., `2 cards • 1 arrows • 1 texts`).

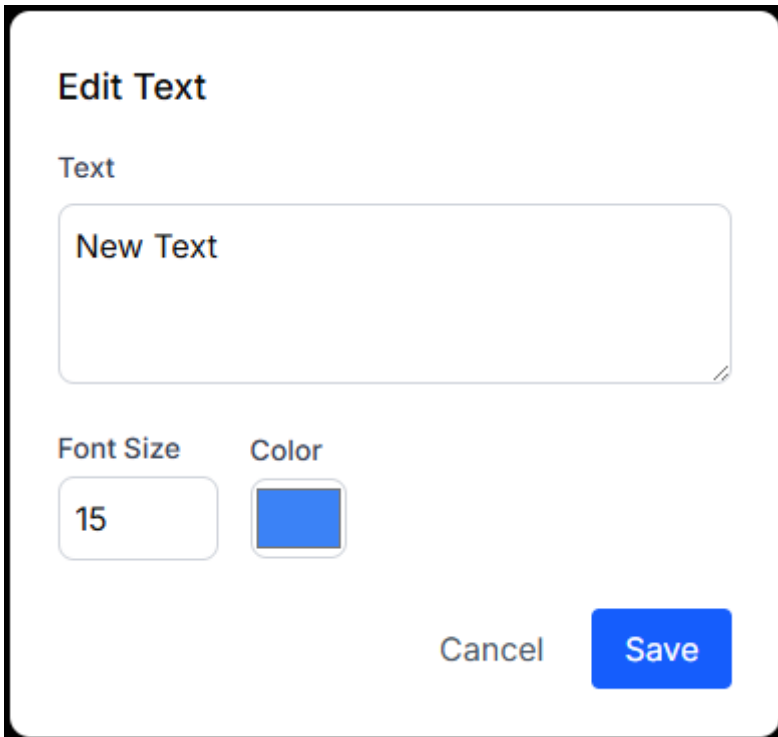

## Editing a Shape Modal

When you click the three dots menu (...) on a shape and choose to edit it, a modal pop-up window appears in the center of the screen with the following configuration fields:

- **Modal Title:** Displays the name of the shape type (e.g., Circle) at the top left.
- **Title Field:** A text input box where you can type or change the main title text displayed on the shape.
- **Description Field:** A larger text area box labeled Description to add detailed notes or context inside the shape properties.
- **Color Selection:** A row of interactive circular color buttons that allows you to click and choose the color styling for the shape.
- **Action Buttons:** Two options sit at the bottom right corner of the window to finalize your changes:
  - **Cancel:** Closes the modal without saving any modifications.
  - **Update:** Saves your text and color changes directly to the canvas element.

## Editing Canvas Text Blocks

When managing a standalone text element on the canvas, the properties window changes to a streamlined Edit Text modal with specific sizing attributes:

- Text: A multi-line editing box where you input the literal message displayed on the canvas grid.
- Font Size: A numerical box where you manually type or change the font scaling size directly (e.g., 15). Note: There is no font-family picker layout; styling changes are strictly adjusted by size.
- Color: A color indicator box showing the current color assigned to the text layer.
- Form Submissions:
  - Cancel: Standard link text button to abandon changes.
  - Save: A blue button to lock in your text edits and font scaling parameters.
